DETAILED ACTION

Claims 1-31 are pending.

Election/Restrictions

Claims 1-31 are generic to a plurality of disclosed patentably distinct species comprising radionuclide-containing compositions. In particular, the composition comprises a radionuclide, a targeting agent, and a complexing moiety. Possible radionuclides include Tc-99m, Re-188, In-111, I-123, I-125, I-131, Yb-169, H-3, C-14, N-15, F-18, P-32, P-33, or Y-90. Possible complexing moieties include those of formula $A-CZ(B)-[C(R1R2)]_n-X$, wherein each of the variables is defined on pages 3-4 of the specification. Possible targeting agents include somatostatin receptor binding peptide, other peptides, oligonucleotides, and antibodies. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Note: Applicant is respectfully requested to elect a *single species* of a radionuclide, a complexing moiety, and a targeting agent. If a formula is elected, the Examiner respectfully requests that each variable be defined and that the chemical name of the formula also be provided.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1617

A telephone call was made to John Sopp on 7/24/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
